

Bharath Chandra Katam

QA Engineer | SDET & Test Automation Engineer

(872) 330-2704 • [Email](#) • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

Profile Summary

- QA Engineer and SDET with 3+ years of experience designing and executing manual and automation testing strategies across web applications, REST APIs, and enterprise data workflows — with a strong track record of improving regression reliability, release quality, and defect detection speed.
- Hands-on expertise building reusable Selenium, Playwright, and Cypress test frameworks in Java and TypeScript; skilled in CI/CD-integrated test pipelines using Jenkins and GitHub Actions, API validation with Postman, and backend testing using SQL.
- Secondary strength in database engineering and ETL/ELT development — experienced with Oracle Data Integrator (ODI), data reconciliation, pipeline validation, and SQL-based data integrity testing across enterprise reporting environments.

Technical Skills

Testing Frameworks: Selenium WebDriver, Playwright, Cypress, TestNG, JUnit, PyTest, REST Assured, JMeter

Languages: Java, TypeScript/JavaScript, Python, SQL

API & Backend Testing: Postman, REST APIs, SQL validation, database testing, log analysis

CI/CD & Tools: Jenkins, GitHub Actions, Git, Docker, Jira, Confluence, Linux

Databases: Oracle, MySQL, SQL Server

ETL/ELT & Data Integration: Oracle Data Integrator (ODI), ODI Studio, Knowledge Modules (KM), Interfaces, Packages, Load Plans, Scenarios, Data Warehousing

Methodologies: Agile/Scrum, SDLC, defect triage, test planning, regression, UAT

Work Experience

ODI Developer

Texperts Inc.

Mar 2026 – Present

United States (Remote)

- Designed and executed automated and manual test cases for ETL/ELT data workflows, validating source-to-target transformations, staging table outputs, and data reconciliation accuracy.
- Built SQL-based validation scripts to verify data integrity, completeness, and transformation correctness across enterprise reporting pipelines.
- Triage workflow failures by analyzing execution logs, database outputs, and dependency paths; documented root cause and resolution steps for engineering teams.
- Collaborated with DBAs and application teams to validate releases, verify fixes, and maintain system reliability across data-driven environments.

QA Engineer

Rebecca Everlene Trust Company

Sep 2025 – Mar 2026

Chicago, IL

- Validated functionality, accuracy, and end-user experience of digital touchpoints and internal workflow applications through structured manual and exploratory testing.
- Created test scenarios, quality checklists, and defect documentation to improve process traceability and reduce repeated operational issues.
- Worked with cross-functional stakeholders to triage issues, verify fixes, and adapt test coverage based on program updates and user feedback.

SDET / QA Automation Engineer

Tech Mahindra

Mar 2021 – Dec 2022

Hyderabad, India

- Designed and developed Java-based Selenium automation frameworks and reusable test utilities for enterprise web applications, improving regression reliability and release readiness.
- Built TypeScript/JavaScript automation scripts using Playwright and Cypress to validate UI workflows, backend responses, and cross-browser behavior.
- Validated REST APIs, database transactions, and application workflows using Postman, SQL queries, and log analysis to identify defects across system layers.

- Converted high-risk manual test cases into CI-friendly automated scripts using Jenkins and GitHub Actions, reducing regression cycle time by 40%.
- Participated in sprint planning, design reviews, defect triage, and test/code reviews in an Agile/Scrum environment.

Projects

ABS Pursuit — Full-Stack Meal Subscription Web App | [Live App](#)

- Tested and validated end-to-end user flows including plan builder, subscription conversion, and payment integration using manual and automated test scenarios.
- Validated cross-device responsiveness and API response accuracy after deployment on Vercel.

Tools: Next.js · React · TypeScript · Vercel

Scotiabank QA / Test Automation Projects

- COVID-19 Job Loss Protection: Built automated regression suites, validated loan protection workflows end-to-end, contributing to a 22% increase in product adoption.
- Credit Card System Enhancement: Validated system restructuring changes using SQL data checks and automated regression; identified 50+ defects and ensured release readiness.
- Mortgage & Payments Processing: Tested payment workflows, EMI/interest validations, and API integrations for payment gateway processing, reducing post-release defects by 30%.
- Worked within Agile sprints — standups, planning, retrospectives — ensuring full test coverage per user story across all three engagements.

Tools: Selenium · Java · TestNG/JUnit · Postman · SQL · JIRA · Git · Jenkins · Agile/Scrum

TechNest — Data Warehouse Design & ETL Pipeline | [GitHub](#)

- Designed and built a centralized data warehouse to unify data from POS, e-commerce, inventory, and CRM systems into a star schema with fact and dimension tables (FACT_SALES, FACT_INVENTORY, Customer Demographics).
- Developed the full ETL pipeline — extract, clean, normalize, and load — and built a logical data model to support real-time reporting and analytics.
- Delivered measurable business impact: 15% increase in sales, 16% reduction in stockouts, and 9% improvement in customer retention through improved forecasting and personalized marketing insights.

Tools: SQL (SQL Server/MySQL) · Python (ETL) · Star Schema Modeling · Power BI · Tableau · Excel/CSV

Education

M.S. in Information Systems

DePaul University, Chicago, IL

Relevant: Database Programming, Data Warehousing, Business Intelligence, Enterprise Cloud Computing

2023 – 2025

B.E. in Computer Science

Keshav Memorial Institute of Technology, India

2020
